Modeling AutoCAD LT is built on the same technical foundation as AutoCAD. The main differences are a simpler user interface, a lower cost for licensing, and AutoLISP automation. It is part of the family of software products called "AutoCAD 2010 or Later". AutoCAD LT supports 2D and 3D modeling, part layouts, drafting, and drawing, among others. AutoCAD's technical documentation is available through CADCentral.net and a free online version can be found at Autodesk. AutoCAD Architecture and AutoCAD Electrical are packaged products within the AutoCAD family of products. Architecture is 3D modeling with a focus on architectural design, and Electrical is 2D drafting, with a focus on engineering design. First-person view For Windows only, AutoCAD supports the software product First-person view (FPV), which integrates the view of a graphic into the title bar of a program. For example, in a two-dimensional drawing, the title bar in AutoCAD displays the location of the user. This function has been used for years and allows the user to view the drawing from a bird's-eye-view perspective. There is also a three-dimensional version of this feature that allows viewing of the model from an egocentric perspective, similar to a viewer being viewed in real life. A number of add-ons exist that add more capabilities, including a 3D view to show some structural aspects of the 3D model, as well as other views of the model. Autodesk 360 Autodesk 360 is a cloud based computer software solution and service. It allows users to access applications and services from any device, anywhere, anytime. Autodesk 360 is a suite of CAD, BIM, PLM and IOT solutions. CAD is the core of the Autodesk 360 platform. Autodesk 360 is integrated with Autodesk 360 Mobile which enables you to create, view and share CAD files from the cloud. Autodesk 360 Application Manager, a management and deployment tool, is integrated with Autodesk 360, allowing users to easily configure, monitor, publish and distribute software applications to Autodesk 360 users. Autodesk 360 Application Designer is a tool that enables software developers and partners to create and deploy software applications that can be shared with Autodesk 360 users.
