Asce 7 10 Pdf Download

The new residential building code requires 20 foot [6 m] side walls with 40 ft. [12 m] footings, and all exterior walls must be a minimum of 4 ft. [1.2 m] above the floor in 3ft. [1.2 m] increments. The minimum allowable flood depth in ASCE 7-10 is 6ft. [1.8 m]. As a general proposition, minimum floor loads in ASCE 7-10 are reduced by 20% from the current standard because the wall-to-floor-base-hollowness ratio is 2.5:1. At 20% less than the current standard, the recommended minimum design floor load in ASCE 7-10 is 1.5 times the current standard. If this standard is met, the associated ASCE 7-10 maximum floor height can be met with a 12 ft. [3.6 m] foundation wall. Minimum design loads shall be based on the Appendix Page 1/20. Loading Structures 7-10 Appendix D: L. S. P. Minimum Design Loads for Buildings and Other Structures 7-10 Loading Structures 7-10 Appendix D: L. Page 3/20. The minimum building envelope loads are reduced by 20% from the current ASCE standard. The corresponding maximum foundation supports must be adjusted to allow for a 10-ft. [3.3 m] space below the floor that can accommodate columns, drift walls, partitions, windows and doors, where applicable. The structural floor, base and side plates shall be specified to meet the minimum loads in this final section. The other load requirements at the balcony level do not change.
