Photoshop is increasingly implementing new features to control the entire photo workflow from shooting to printing - including RAW support, image protection, lens correction, image stabilizer and much more. Some of Adobe's latest camera app solutions include Auto Save Mode, Smart Remote Recording and new RAW support. Read on to learn more about them. **Auto Save Mode:** To save time and generate the most flexibility during your editing session, Adobe's Auto Save provides a convenient way to take multiple shots while also enabling you to easily bookmark positions, hyperscope and bookmark for future editing. This feature is not new for Photoshop but new to after 2018 (version number 20.3.0) years. **Adobe Photoshop Lens:** The new Photoshop Lens is a variety of tools that are useful for both professionals and amateurs. It helps the experts in traditional photos, including photo editing, image retouching, and more. Lens can be used as a stand-alone app, or it can fit with multiple Adobe apps like Photoshop, Lightroom, Illustrator, InDesign, etc. **RAW support:** Adobe has brought the incredibly useful Adobe Camera Raw (ACR) technology to Photoshop in two ways: The new Photoshop Layers panel can work offline, in addition to the existing offline feature that works when you're connected to the Internet. Another new feature is the Layer Mask panel, which allows you to blend up to seven layers in the same selection mask. This feature is particularly helpful in some situations, heeding that few people use Layer Masks on a daily basis. It's another great way to add dimension and depth to pictures.
