The 9.7-inch iPad Pro features the A9X chip, like the iPad Pro. It is three times faster than a 1,000-MHz ARM M3 CPU, so performance is lightning quick. It also features the same 12-megapixel Apple-designed camera as the iPhone 7, so apps like Snapseed and Instagram come to life. The iPad Pro has a terrific screen that handles photos and videos beautifully. In Hacksaw, I tested video editing, photo editing, and display. While I don't know how other apps feel, I can say that the iPad Pro's display is as vibrant as ever. But it is not a Retina display — the resolution is unchanged. Apple hasn't shown any interest in the high-res display trend, so your eyes do not get bored with the same old resolution. And it carries the same 9.7-inch size as the original iPad Pro and third-generation iPad, so it is very similar in size to the 9.7-inch iPad Air 2 or Smart Keyboard. I'm professional freelance artist and writer. After working in other areas for many years now, most recently as a technical editor, working one-on-one with authors I've been struck by how the quality of some of my illustrations and comics has dramatically improved since swapping 2K for the iPad, Apple Pencil, and Adobe Sketch. And after years of work, the high cost of instruction and resulting frustration of mastering my craft, it's nice to find a way to study digital art outside of the classroom. There is just one thing: Adobe has been ducking a lot of the tough creative decisions and letting its applications stick with quick fixes. Recently, I've begun to realize that's not helping the process of creating. With that in mind, I began to dive deeper to see what I could do with these new tools in the work I do as a professional.
